

2011年 鋼結構作業守則 (2023年修訂版)

[中文版本暫只提供
封面頁及前言]

2011年鋼結構作業守則 (2023年修訂版)

前言

屋宇署於 2008 年成立鋼結構作業守則技術委員會（技術委員會），目的是向建築業界收集有關使用《2005 年鋼結構作業守則》（《2005 年守則》）的意見和回應，務使作業守則能配合設計和技術上的發展。

《2011年鋼結構作業守則》（《2011 年守則》）於2011 年 10 月發布，是技術委員會歷經三年就《2005 年守則》的內容作出檢討，並考慮鋼結構的最新設計和技術後編撰而成的。《2011 年守則》不單提供有關遵從《建築物條例》規定的全面指引，更為在職工程師及建築業從業員就鋼設計及建造方面注入新元素，並提供最新的參考資料。

屋宇署因應技術委員會的建議，分別於 2016 年 11 月及 2021 年 5 月公布《2011 年守則》的修訂內容，並於 2021 年 8 月發布《2011 年守則》（2021年修訂版），其後再於 2023 年 3 月公布《2011 年守則》（2021 年修訂版）的進一步修訂內容，當中包括就建築業使用的類別 1H 高強鋼材的修訂。

《2011 年守則》（2023 年修訂版）於 2023 年 3 月發布，以整合過往的所有修訂，扼述如下：

修訂日期	參考資料
2016 年 11 月 2021 年 5 月	https://www.bd.gov.hk/doc/en/resources/codes-and-references/code-and-design-manuals/OldVersions/CoP_Steel_ov.zip
2021 年 8 月 《2011 年守則》 （2021年修訂版）	
2023 年 3 月 《2011 年守則》 （2023 年修訂版）	https://www.bd.gov.hk/doc/tc/resources/codes-and-references/code-and-design-manuals/SUOS2011.pdf 

感謝技術委員會的成員，就《2011年守則》的擬備工作及後續修訂建議所付出的貢獻和努力。

儘管本守則並非法定文件，但遵從本守則要求而進行的作業，可被視為符合《建築物條例》及相關規例的規定。

本修訂版可在屋宇署網站(www.bd.gov.hk)內“資源”欄目下的“守則，設計手冊及指引”版面瀏覽，亦可按網站中規定的條款及細則下載。

初 版 ： 2011年10月
第 二 版 ： 2021年8月
本 修 訂 版 ： 2023年3月

CONTENTS

Foreword	i
Contents	iii
List of Figures	xiv
List of Tables	xvi
1 GENERAL	1
1.1 Scope	1
1.2 Design Philosophy	2
1.2.1 <i>Aims of structural design</i>	2
1.2.2 <i>Design responsibility and assumptions</i>	2
1.2.3 <i>Structural system, integrity and robustness</i>	3
1.2.4 <i>Overall stability</i>	3
1.2.5 <i>Limit State Design</i>	3
1.2.6 <i>Economy</i>	3
1.2.7 <i>Design working life</i>	3
1.3 References	4
1.4 Glossary of Terms and Definitions	4
1.4.1 <i>General definitions</i>	4
1.4.2 <i>Structural element definitions</i>	5
1.4.3 <i>Structural behaviour definitions</i>	6
1.4.4 <i>Material behaviour definitions</i>	7
1.4.5 <i>Section type definitions</i>	7
1.4.6 <i>Connection definitions</i>	8
1.5 Major Symbols	8
2 LIMIT STATE DESIGN PHILOSOPHY	17
2.1 GENERAL	17
2.1.1 <i>Introduction</i>	17
2.1.2 <i>Simple design</i>	17
2.1.3 <i>Continuous design</i>	17
2.1.4 <i>Semi-continuous design</i>	17
2.1.5 <i>Design justification by tests</i>	17
2.1.6 <i>Performance-based design</i>	17
2.1.7 <i>Calculation accuracy</i>	18
2.1.8 <i>Foundation design</i>	18
2.2 LIMIT STATE PHILOSOPHY	18
2.3 ULTIMATE LIMIT STATES (ULS)	19
2.3.1 <i>Limit state of strength</i>	19
2.3.2 <i>Stability limit states</i>	19
2.3.3 <i>Fatigue</i>	20
2.3.4 <i>Structural integrity and robustness</i>	23
2.3.5 <i>Brittle fracture</i>	26
2.4 SERVICEABILITY LIMIT STATES (SLS)	26
2.4.1 <i>Serviceability loads</i>	26
2.5 LOADING	26
2.5.1 <i>General</i>	26
2.5.2 <i>Dead and imposed loading</i>	26
2.5.3 <i>Wind loading</i>	26
2.5.4 <i>Loads from earth and water pressure</i>	27
2.5.5 <i>Load effects from differential settlement of foundations</i>	27
2.5.6 <i>Load effects from temperature change</i>	27
2.5.7 <i>Loads from cranes</i>	27
2.5.8 <i>Notional horizontal forces</i>	28
2.5.9 <i>Exceptional loads and loads on key elements</i>	29

2.5.10	Loads during construction.....	29
2.5.11	Loads on temporary works in construction	29
3	MATERIALS.....	30
3.1	STRUCTURAL STEEL	30
3.1.1	General	30
3.1.2	Design strength for normal strength steels and high strength steels	31
3.1.3	Design strength for ultra high strength steels	37
3.1.4	Uncertified steel	37
3.1.5	Through thickness properties	37
3.1.6	Other properties	37
3.2	PREVENTION OF BRITTLE FRACTURE.....	37
3.2.1	Procedure	38
3.2.2	Determination of maximum permissible values of element thickness	39
3.3	BOLTS	40
3.3.1	Normal bolts	40
3.3.2	High strength friction grip or preloaded bolts	40
3.4	WELDING CONSUMABLES.....	40
3.5	STEEL CASTINGS AND FORGINGS	40
3.6	MATERIALS FOR GROUTING OF BASEPLATES	40
3.7	MATERIALS FOR COMPOSITE CONSTRUCTION	40
3.7.1	Concrete	40
3.7.2	Reinforcement.....	40
3.7.3	Profiled steel sheets.....	41
3.7.4	Shear studs.....	41
3.8	COLD-FORMED STEEL MATERIAL PROPERTIES.....	41
3.8.1	Mechanical properties.....	41
4	LOAD FACTORS AND MATERIAL FACTORS.....	44
4.1	PARTIAL SAFETY FACTORS.....	44
4.2	MATERIAL FACTORS.....	44
4.2.1	Steel plates and sections	44
4.2.2	Bolts	45
4.2.3	Reinforcement and concrete in composite design.....	45
4.2.4	Grout for base plates and wall plates	45
4.3	LOAD FACTORS AND COMBINATIONS	45
4.3.1	Load combinations for normal ultimate limit state.....	45
4.3.2	Load combinations for overhead traveling cranes.....	46
4.3.3	Load combinations for building assessment.....	46
4.3.4	Load combinations for temporary works in construction	46
4.3.5	Load combinations for exceptional events.....	46
4.3.6	Summary of partial load factors.....	47
4.3.7	Load combinations for serviceability limit states.....	47
5	SERVICEABILITY LIMIT STATES	48
5.1	GENERAL.....	48
5.2	DEFLECTION	48
5.3	WIND INDUCED VIBRATION.....	49
5.3.1	Wind sensitive buildings and structures.....	49
5.3.2	Serviceability limit state.....	49
5.3.3	Dynamic structural characteristics	49
5.3.4	Serviceability criteria for tall buildings.....	49
5.3.5	Serviceability criteria for communication and broadcasting towers.....	50
5.3.6	Reduction of wind induced dynamic response	50
5.4	HUMAN INDUCED FLOOR VIBRATION	50
5.5	DURABILITY	51
5.5.1	General	51
5.5.2	Types of protection against corrosion	51
5.5.3	Corrosion from residual stresses.....	53

6	DESIGN METHODS AND ANALYSIS	54
6.1	METHODS OF ANALYSIS	54
6.2	ANALYSIS MODELS AND ASSUMPTIONS	55
6.3	FRAME CLASSIFICATION	55
6.3.1	General	55
6.3.2	Elastic critical load factor	55
6.3.3	Non-sway frames	56
6.3.4	Sway frames	56
6.3.5	Sway ultra-sensitive frames	56
6.4	IMPERFECTIONS	56
6.4.1	General	56
6.4.2	Frame imperfections	57
6.4.3	Member imperfections	57
6.4.4	Elastic critical mode	58
6.5	SIMPLE DESIGN	58
6.6	FIRST-ORDER LINEAR ELASTIC ANALYSIS (FIRST-ORDER INDIRECT ANALYSIS)	58
6.6.1	General	58
6.6.2	Moment amplification for sway frames	59
6.6.3	Effective length for sway and non-sway frames	59
6.6.4	Maximum slenderness ratio	61
6.7	SECOND-ORDER P-Δ-ONLY ELASTIC ANALYSIS (SECOND-ORDER INDIRECT ANALYSIS)	61
6.7.1	General	61
6.7.2	Method of analysis	61
6.7.3	Applications and limitations	61
6.8	SECOND-ORDER P-Δ-δ ELASTIC ANALYSIS (SECOND-ORDER DIRECT ANALYSIS)	62
6.8.1	General	62
6.8.2	Method of analysis	62
6.8.3	Applications and limitations	62
6.9	ADVANCED ANALYSIS	63
6.9.1	General	63
6.9.2	Method of analysis	63
6.9.3	Applications and limitations	63
6.10	BRACING MEMBERS	63
6.11	CONNECTION CLASSIFICATION IN ANALYSIS	64
6.11.1	Pinned connections	64
6.11.2	Rigid connections	64
6.11.3	Semi-rigid connections	64
7	SECTION CLASSIFICATION	65
7.1	GENERAL	65
7.2	CLASSIFICATION	66
7.3	STRESS RATIOS FOR CLASSIFICATION	70
7.4	FLANGES OF COMPOUND I- OR H-SECTIONS	71
7.5	EFFECTIVE PLASTIC MODULUS	72
7.5.1	General	72
7.5.2	I- or H-sections with equal flanges	72
7.5.3	Rectangular hollow sections	72
7.5.4	Circular hollow sections	73
7.6	EFFECTIVE WIDTH METHOD FOR SLENDER CROSS-SECTIONS	73
7.7	EFFECTIVE STRESS METHOD FOR SLENDER CROSS-SECTIONS	73
7.8	SHIFT OF THE CENTROID OF THE EFFECTIVE CROSS-SECTION	74
8	DESIGN OF STRUCTURAL MEMBERS	76
8.1	GENERAL	76
8.2	RESTRAINED BEAMS	76

8.2.1	Shear capacity	76
8.2.2	Moment capacity	77
8.2.3	Beams with web openings	78
8.2.4	Castellated beams	79
8.3	LATERAL-TORSIONAL BUCKLING OF BEAMS	80
8.3.1	Intermediate and end lateral restraints	80
8.3.2	Torsional restraint	81
8.3.3	Normal and destabilizing loads	81
8.3.4	Effective length for lateral-torsional buckling	81
8.3.5	Moment resistance to lateral-torsional buckling	83
8.4	PLATE GIRDERS	92
8.4.1	Design strength	92
8.4.2	Minimum web thickness for serviceability	92
8.4.3	Minimum web thickness to avoid compression flange buckling	92
8.4.4	Moment capacity of restrained girders	92
8.4.5	Effects of axial force	93
8.4.6	Shear buckling resistance	93
8.4.7	Intermediate transverse web stiffeners	93
8.4.8	End anchorage	120
8.4.9	Panels with openings	120
8.4.10	Web capacity and stiffeners design	120
8.4.11	Other types of stiffeners	123
8.4.12	Connections between web stiffeners and webs	123
8.4.13	Connections between web stiffeners and flanges	123
8.5	BUCKLING RESISTANCE MOMENT FOR SINGLE ANGLE MEMBERS	124
8.6	TENSION MEMBERS	124
8.6.1	Tension capacity	124
8.6.2	Members with eccentric connections	124
8.6.3	Single and double angle, channel and T-sections	124
8.6.4	Double angle, channel and T-sections with intermediate connections	125
8.7	COMPRESSION MEMBERS	125
8.7.1	Segment length	125
8.7.2	Effective length in general	125
8.7.3	Restraints	126
8.7.4	Slenderness	126
8.7.5	Compression resistance	126
8.7.6	Compressive strength	127
8.7.7	Eccentric connections	152
8.7.8	Simple construction	152
8.7.9	Effective length of sections in triangulated structures and trusses	152
8.8	TENSION MEMBERS UNDER COMBINED AXIAL FORCE AND MOMENTS	153
8.9	COMPRESSION MEMBERS UNDER COMBINED AXIAL FORCE AND MOMENTS	154
8.9.1	Cross-section capacity	154
8.9.2	Member buckling resistance	154
8.9.3	Member buckling resistance – (Alternative to 8.9.2)	157
8.10	TORSIONAL AND FLEXURAL-TORSIONAL BUCKLING OF COMPRESSION MEMBERS	161
8.11	PORTAL FRAMES	161
8.11.1	General	161
8.11.2	Elastic design	161
8.11.3	Plastic design	161
8.11.4	In-plane stability	161
8.11.5	Out-of-plane stability	164
8.12	LACED AND BATTENED STRUTS	168
8.12.1	Laced struts	168
8.12.2	Battened struts	168
Appendix 8.1	170
Appendix 8.2	171
Appendix 8.3	172

Appendix 8.4	173
9 CONNECTIONS.....	174
9.1 GENERAL.....	174
9.2 WELDED CONNECTIONS.....	175
9.2.1 Through-thickness tension.....	175
9.2.2 Types of welds.....	175
9.2.3 Weldability and electrodes.....	175
9.2.4 Welded connections to unstiffened flanges.....	175
9.2.5 Strength of welds.....	176
9.3 BOLTED CONNECTIONS.....	183
9.3.1 Bolt spacing.....	183
9.3.2 End and edge distances.....	183
9.3.3 Hole dimensions.....	184
9.3.4 Sectional area of connected parts.....	184
9.3.5 Block shear.....	186
9.3.6 Design strength of bolts under shear and bearing.....	186
9.3.7 Design strength of bolts in tension.....	190
9.3.8 Combined shear and tension.....	191
9.3.9 Bolts combined with welds.....	191
9.3.10 Pin connections.....	191
9.3.11 Connections for hollow sections of lattice girders.....	193
9.4 BASEPLATE AND ANCHOR CONSTRUCTION.....	193
9.4.1 Column base plates.....	193
9.4.2 Anchor bolts for base plates, wall plates and hangers.....	194
9.5 STEEL CASTINGS AND FORGINGS.....	196
10 COMPOSITE CONSTRUCTION.....	197
10.1 MATERIALS.....	197
10.1.1 Structural steel.....	197
10.1.2 Concrete.....	197
10.1.3 Reinforcement.....	198
10.1.4 Shear connectors.....	198
10.1.5 Profiled steel sheets.....	198
10.2 COMPOSITE BEAMS.....	199
10.2.1 General.....	199
10.2.2 Analysis of internal forces and moments.....	201
10.2.3 Establishment of composite cross-sections.....	203
10.2.4 Classification of composite cross-sections.....	204
10.2.5 Section capacities and properties of composite cross-sections.....	206
10.2.6 Ultimate limit state design.....	209
10.2.7 Serviceability limit state design.....	211
10.3 SHEAR CONNECTION.....	215
10.3.1 General.....	215
10.3.2 Design resistance of shear connectors.....	215
10.3.3 Provision of shear connectors.....	218
10.3.4 Detailing of shear connectors.....	220
10.3.5 Transverse reinforcement.....	221
10.4 COMPOSITE SLABS WITH PROFILED STEEL SHEET.....	225
10.4.1 General.....	225
10.4.2 Form of construction.....	225
10.4.3 Limit state design.....	226
10.4.4 Design of profiled steel sheets in construction stage.....	228
10.4.5 Design of composite slabs in composite stage.....	230
10.4.6 Detailing provisions.....	237
10.4.7 Constructional details.....	239
10.5 COMPOSITE COLUMNS.....	241
10.5.1 General.....	241
10.5.2 General method of design.....	242

10.5.3	<i>Simplified method of design</i>	243
10.5.4	<i>Shear connection and load introduction</i>	254
10.5.5	<i>Detailing provisions</i>	257
11	DESIGN OF COLD-FORMED STEEL OPEN SECTIONS, SHEET PROFILES, HOLLOW SECTIONS AND SHEET PILE SECTIONS	259
11.1	GENERAL DESIGN OF OPEN SECTIONS AND SHEET PROFILES	259
11.2	MATERIAL PROPERTIES	260
11.2.1	<i>Physical properties</i>	260
11.2.2	<i>Mechanical properties</i>	260
11.3	SECTION PROPERTIES	261
11.3.1	<i>Gross section properties</i>	261
11.3.2	<i>Effective section properties under tension</i>	262
11.3.3	<i>Effective section properties under compression and bending</i>	262
11.3.4	<i>Local buckling</i>	262
11.3.5	<i>Flange curling</i>	268
11.4	MEMBERS UNDER LATERAL LOADS	269
11.4.1	<i>General</i>	269
11.4.2	<i>Moment capacity</i>	269
11.4.3	<i>Shear capacity</i>	270
11.4.4	<i>Combined bending and shear</i>	271
11.4.5	<i>Web crushing capacity</i>	271
11.4.6	<i>Combined bending and web crushing</i>	275
11.4.7	<i>Lateral buckling</i>	276
11.4.8	<i>Calculation of deflection</i>	279
11.4.9	<i>Effects of torsion</i>	280
11.5	MEMBERS UNDER AXIAL LOADS	280
11.5.1	<i>Members under tension</i>	280
11.5.2	<i>Members under compression</i>	282
11.5.3	<i>Flexural buckling</i>	282
11.5.4	<i>Flexural-torsional buckling</i>	285
11.5.5	<i>Combined compression and bending</i>	286
11.6	CONNECTIONS	287
11.6.1	<i>General recommendations</i>	287
11.6.2	<i>Fastenings with bolts</i>	287

14.3	WORKMANSHIP – WELDING	328
14.3.1	General.....	328
14.3.2	Welder qualification.....	328
14.3.3	Welding procedure specifications.....	328
14.3.4	Assembly.....	329
14.3.5	Non-destructive testing of parent material.....	330
14.3.6	Non-destructive testing of welds (NDT).....	330
14.3.7	Shear stud welding.....	337
14.4	WORKMANSHIP – BOLTING	337
14.4.1	General.....	337
14.4.2	Ordinary bolted assemblies.....	337
14.4.3	Pre-loaded bolt assemblies.....	339
14.5	WORKMANSHIP – ERECTION.....	340
14.5.1	Erection method statement.....	340
14.5.2	Handling and storage.....	340
14.5.3	Damaged steelwork.....	340
14.5.4	Column base plates and slabs.....	341
14.5.5	Grouting.....	341
14.5.6	Stability.....	341
14.5.7	Alignment of part of the structure.....	341
14.5.8	Temperature effects.....	341
14.5.9	Site welding.....	341
14.5.10	Site bolting.....	341
14.6	PROTECTIVE TREATMENT	341
14.6.1	General.....	341
14.6.2	Materials.....	342
14.6.3	Surface preparation.....	342
14.6.4	Sprayed metal coatings.....	342
14.6.5	Hot-dip galvanizing.....	342
14.6.6	Paint treatments.....	343
14.6.7	Inspection and testing.....	343
15	ACCURACY OF FABRICATION AND ERECTION.....	344

15.1	GENERAL	344
15.2	PERMITTED DEVIATIONS IN THE CROSS SECTION OF ROLLED COMPONENTS	344
15.3	PERMITTED DEVIATIONS IN COMPONENTS AFTER FABRICATION	345
15.3.1	<i>Squareness of end not prepared for bearing</i>	345
15.3.2	<i>Squareness of ends prepared for bearing</i>	345
15.3.3	<i>Straightness of both axes or of individual webs of flanges</i>	345
15.3.4	<i>Length</i>	345
15.3.5	<i>Curved or cambered</i>	345
15.3.6	<i>Squareness at bearing</i>	345
15.4	PERMITTED DEVIATIONS FOR ELEMENTS OF FABRICATED MEMBERS	346
15.4.1	<i>Position of fittings</i>	346
15.4.2	<i>Position of holes</i>	346
15.4.3	<i>Punched holes</i>	346
15.4.4	<i>Shared or cropped edges of plates or angles</i>	346
15.4.5	<i>Flatness</i>	346
15.4.6	<i>Notches</i>	346
15.4.7	<i>Column base plates</i>	346
15.5	PERMITTED DEVIATIONS IN PLATE GIRDER SECTIONS	347
15.5.1	<i>Depth</i>	347
15.5.2	<i>Flange width</i>	347
15.5.3	<i>Squareness of section</i>	347
15.5.4	<i>Web eccentricity</i>	347
15.5.5	<i>Flanges</i>	347
15.5.6	<i>Top flange of crane girder</i>	347
15.5.7	<i>Web distortion</i>	347
15.5.8	<i>Cross section at bearings</i>	347
15.6	PERMITTED DEVIATIONS IN FABRICATED BOX SECTIONS	348
15.6.1	<i>Plate widths</i>	348
15.6.2	<i>Squareness</i>	348
15.6.3	<i>Plate distortion</i>	348
15.7	PERMITTED DEVIATIONS OF STIFFENERS	348
15.7.1	<i>Web stiffeners</i>	348
15.7.2	<i>Web stiffeners</i>	348
15.8	PERMITTED DEVIATIONS OF LATTICE COMPONENTS	349
15.8.1	<i>Panel length</i>	349
15.8.2	<i>Cumulative length of panels</i>	349
15.8.3	<i>Joint eccentricity</i>	349
15.8.4	<i>Overall cross section</i>	349
15.8.5	<i>Tubular lattice girders</i>	349
15.9	PERMITTED DEVIATIONS OF COLD FORMED SECTIONS	350
15.9.1	<i>Position of measurement</i>	350
15.9.2	<i>Thickness</i>	350
15.9.3	<i>External dimensions</i>	350
15.9.4	<i>Length</i>	350
15.9.5	<i>Angular tolerance</i>	350
15.9.6	<i>Straightness</i>	350
15.9.7	<i>Angle of twist</i>	351
15.9.8	<i>Compound members</i>	351
15.9.9	<i>Flatness</i>	351
15.10	PERMITTED DEVIATIONS FOR FOUNDATIONS, WALLS AND HOLDING DOWN BOLTS	352
15.10.1	<i>Foundation level</i>	352
15.10.2	<i>Vertical wall</i>	352
15.10.3	<i>Pre-set foundation bolt or bolt groups when prepared for adjustment</i>	352
15.10.4	<i>Pre-set foundation bolt or bolt groups when not prepared for adjustment</i>	352
15.10.5	<i>Pre-set wall bolt or bolt groups when not prepared for adjustment</i>	352
15.10.6	<i>Embedded steel anchor plate</i>	352
15.11	APPLICATION OF PERMITTED DEVIATION FOR ERECTED COMPONENTS	353
15.12	PERMITTED DEVIATIONS OF ERECTED COMPONENTS AND STRUCTURES	353

15.12.1	Position of columns at base	353
15.12.2	Overall plan dimensions	353
15.12.3	Single storey columns plumb	353
15.12.4	Multi-storey columns plumb.....	353
15.12.5	Alignment of columns at splice	354
15.12.6	Location of column splice	354
15.12.7	Gap between bearing surfaces	354
15.12.8	Alignment of adjacent perimeter columns	354
15.12.9	Beam level	354
15.12.10	Level at each end of same beam	354
15.12.11	Level of adjacent beams within a distance of 5 metres.....	354
15.12.12	Level of beams at adjacent floors.....	355
15.12.13	Beam alignment.....	355
15.12.14	Position in plan of members	355
15.12.15	Crane gantry column plumb	355
15.12.16	Crane gantries gauge of rail tracks	355
15.12.17	Joints in gantry crane rails – rail surface	355
15.12.18	Joints in gantry crane rails – rail edge	356
15.12.19	Profile steel floor decking	356
15.12.20	Thickness of bedding.....	356
15.12.21	Position on bearing.....	356
16	LOADING TESTS	357
16.1	GENERAL.....	357
16.1.1	Scope	357
16.1.2	Requirement for testing.....	357
16.1.3	Recommendations for conduct of tests.....	357
16.2	PROOF, STRENGTH AND FAILURE TESTS	358
16.2.1	Proof and strength tests	358
16.2.2	Failure test.....	359
16.3	TEST CONDITIONS, METHODS AND PROCEDURES.....	359
16.3.1	Test conditions.....	359
16.3.2	Loading and unloading	359
16.3.3	Measurements.....	360
16.3.4	Material properties.....	360
16.3.5	Relative strength coefficient	360
16.3.6	Quality control of load testing	360
16.3.7	Contents of test report.....	360
16.4	TESTING OF COMPOSITE SLABS.....	361
16.4.1	General.....	361
16.4.2	Specific tests	361
16.4.3	Parametric tests.....	364
17	GUIDANCE FOR EVALUATION AND MODIFICATION OF EXISTING STRUCTURES	367
17.1	GENERAL APPROACH	367
17.2	STRUCTURAL ASSESSMENT SURVEY	367
17.2.1	Original materials.....	367
17.2.2	Appraisal report.....	368
17.3	DESIGN AND ANALYSIS ISSUES.....	368
17.3.1	Structural appraisal analysis and design check	368
17.3.2	Overall stability of existing and new structure	368
17.3.3	Details for connection of new to old structure	368
17.3.4	Upgrading of original structure	368
17.3.5	Considerations for design against extreme events (fire, accident, terrorism).....	369
