Practice Note for Authorized Persons, Registered Structural Engineers and Registered Geotechnical Engineers

APP-41

Buildings to be Planned for Use by Persons with a Disability Regulation 72 of Building (Planning) Regulations Design Manual: Barrier Free Access 2008

Pursuant to section 84 of the Disability Discrimination Ordinance (Cap. 487), the Building Authority (BA), as a public authority which has the power to approve building works shall not, in respect of those works, approve plans, whether for a new building or for the alterations or additions to an existing building unless the person seeking approval satisfies the BA that such access as is reasonable in the circumstances to the building or premises will be provided for persons with a disability. The Building (Planning) Regulations (B(P)R) also require certain categories of buildings to be planned for use by persons with a disability. Access and facilities for persons with a disability (collectively referred to as "barrier free access") shall be incorporated in a building at the design stage of the project, to comply with the legislation.

Relevant Building Regulations

- 2. The regulations stipulating requirements for buildings to be planned for use by persons with a disability include regulation 8(1)(m) of the Building (Administration) Regulations (B(A)R), regulations 2(1), 39(3)(e) and 72 and the Third Schedule of the B(P)R and regulation 61(3) of the Building (Standards of Sanitary Fitments, Plumbing, Drainage Works and Latrines) Regulations.
- 3. Regulation 72 of the B(P)R and the Third Schedule thereto set out the statutory requirements for barrier free access in private buildings. The B(P)R are supplemented by the Design Manual: Barrier Free Access 2008 (Design Manual 2008) which has incorporated the statutory design requirements as well as recommendations for best practice to improve the barrier free access.
- 4. Part 4 of the Third Schedule to the B(P)R identifies those categories of buildings (including domestic, non-domestic and composite buildings) where limited barrier free access are to be provided under regulation 72 of the B(P)R. Save for those buildings which are exempted under regulation 72(4) of the B(P)R, all other buildings not included in Part 4 of the Third Schedule are required to comply fully with the regulations.

Exemption from or Modification of Regulation 72 of B(P)R

5. In an application for approval of plans for a new building or for the alterations or additions to an existing building, barrier free access should be clearly shown on the submitted plans in accordance with regulation 8(1)(m) of the B(A)R.

6. There are occasions where proposals for building development cannot meet the full requirements for barrier free access stipulated in the regulations. Exemption from or modification of the regulations will be considered by the BA on individual merits of each case. The BA is prepared to consider applications to vary the requirements provided that the BA is satisfied that special circumstances exist. Examples of special circumstances include the physical location and immediate environs of a development site render compliance with the legislation impracticable or where such provisions would impose unjustifiable hardship on the applicant or any other person. The circumstances under which the BA may consider such applications are outlined in Appendix A.

Alteration and Addition Submissions

7. Where alteration and addition works are proposed to an existing building without initial access for persons with a disability, all practical measures should be taken to provide suitable barrier free access. Applications for exemption citing the prevailing special circumstances would be considered on a case by case basis.

Advisory Committee on Barrier Free Access

8. In considering applications for exemption from or modification of the regulations, the BA has established an advisory committee namely Advisory Committee on Barrier Free Access (ACBFA) to provide a forum for the deliberation and discussion of the proposals. The BA will take into account the advice given by the ACBFA in making decisions on the applications. The terms of reference and membership of the ACBFA are at Appendix B.

Amendments to Design Manual 2008

- 9. The Buildings Department (BD) has set up a Technical Committee (TC) to, among others, collect and consider the views and feedback from the building sector, rehabilitation sector and relevant stakeholder organisations arising from their practical experience in the use of the Design Manual 2008. Taking into account the advice of the TC, the following amendments to the Design Manual 2008 have been promulgated and incorporated into the Design Manual 2008 (2024 Edition):
 - (a) Appendix C November 2012;
 - (b) Appendix D September 2015;
 - (c) Appendix E April 2017;
 - (d) Appendix F June 2019;
 - (e) Appendix G October 2020;
 - (f) Appendix H December 2021; and
 - (g) Appendix I May 2024.

- 10. To further encourage ageing in place, the Government formed a Task Force on Promoting Elderly-friendly Building Design (Task Force) led by the Deputy Financial Secretary in 2024 and a series of design requirements have been formulated for application. After consultation with the relevant stakeholders, the design requirements will be implemented in two stages, first administratively by updating the relevant practice notes and Design Manual 2008 (2024 Edition), and followed by amending the B(P)R to stipulate the mandatory requirements.
- 11. Forming part of the series of design requirements formulated by the Task Force, Chapter 6 of the Design Manual 2008 (2024 Edition) has been amended at Appendix J which provides recommended design requirements to promote active ageing by enabling the elderly to achieve autonomy and independence without the help of others and promote their well-being, in particular social interaction among elderly and between elderly and other groups. The recommended design requirements will also help to create building design that is beneficial and usable for all people. Authorized persons are therefore encouraged to recommend to their clients to incorporate the design features in their developments.
- 12. All the amendments in paragraph 9 and Appendix J have been incorporated in the Design Manual 2008 (2025 Edition) and uploaded to BD website www.bd.gov.hk.

(HO Chun-hung) Building Authority

Ref.: BD GP/BREG/P/25 (XIV)

This PNAP is previously known as PNAP 112

First issue April 1985 Last revision May 2024

This revision June 2025 (AD/NB1) (Paragraphs 9 & 10 amended, paragraphs 11 & 12 and Appendix J added)

Building (Planning) Regulation 72

Special Circumstances that may be Acceptable to the Building Authority for Applications to Vary Provisions

For alterations and additions works to existing buildings where initial access for persons with a disability is not provided, the Building Authority would be satisfied with the design of the building in respect of the non-provision of facilities for persons with locomotory disabilities in cases where the provision of a ramp access would involve alteration works to the common parts of a building and where the applicant can demonstrate that:

- the applicant has no control over the area;
- consent from co-owners or owners' corporation to permit the carrying out of the alteration works to the common parts of the building is declined or cannot be obtained; and
- where ground beam is involved, there is spatial or structural constraint.

Advisory Committee on Barrier Free Access (ACBFA)

Terms of Reference

The terms of reference of ACBFA are to offer advice to the Building Authority in relation to plans submitted for a new building or for alteration and addition to an existing building as to whether reasonable access and facilities will be provided in the building for persons with a disability. In arriving at such an advice, the Committee should consider the following:

- the standards and requirements contained in Building (Planning) Regulation 72, the Design Manual - Barrier Free Access 2008 and any other relevant statutory provisions;
- whether it is practicable to provide such access within the curtilage of the building, bearing in mind the physical location and immediate environs of the building; and
- whether providing such access would impose unjustifiable hardship on the person seeking approval or any other person.

Membership

The membership of ACBFA is as follows:

Chairman : Assistant Director/New Buildings 1, Buildings Department

Members : A representative of the Commissioner for Rehabilitation

A representative of the Director of Architectural Services

A representative (authorized person) appointed by the Director of Buildings

A lay member appointed by the Director of Buildings

Three representatives nominated by the Commissioner for Rehabilitation representing the physically handicapped, visually impaired and hearing impaired respectively

Technical Secretary/Building, Buildings Department

Secretary : Building Surveyor/Technical Services 3, Buildings Department

In attendance: The Senior Building Surveyor or Building Surveyor of the case

(Rev. 11/2012)

| Item | 2008 version | Amendments |
|------|--------------|--|
| | | (d) Tactile Arabic numerals with suitable design (e.g. 15mm high) and normally engraved by 1mm instead of Braille shall be provided on the keypad. |
| | | (e) The user shall be able to know that the DCS has been operated. The call registration shall be confirmed by a visible and audible signal. The audible signal shall be given on every individual call registration even if the call is already registered. Also, a speech output system (in Cantonese, Putonghua and English) of the keypad for verification of the designated floor shall be provided. |
| | | (f) All essential buttons including emergency alarm push button, intercom controls, and the door opening push button shall be provided inside the lift car. |
| | | (g) The keypad at the lift hall and all the essential buttons in the lift car shall be located between 900mm and 1200mm above the finished floor level of the lift hall or the floor of the lift car in compliance with section 80(2) of the Third Schedule to the Building (Planning) Regulations and paragraph 80(2) in Division 19. |
| | | (h) The design of the keypad shall comply with the international standards for the use of persons with a disability such as the European Standard EN 81-70:2003, Safety rules for the construction and installations of lifts - Particular applications for passenger and goods passenger lifts - Part 70: Accessibility to lifts for persons including persons with disability. Adequate signal and indication for use shall be provided including an illuminated visual indicator and an audible signal. |
| | | (i) Braille and tactile plate indicating the user's instruction shall be mounted on the wall adjacent to the keypad reachable by the visually impaired users. The instruction shall be in both English and Chinese. |
| | | (j) When the "wheelchair" button is pushed, the gong sound and voice announcement (in Cantonese, Putonghua and English) will be activated on the arrival of the accessible lift. To allow the persons with a disability to catch the lift, time allowed for keeping the lift door open and the response time for the keypad shall be suitably extended. |

| Item | 2008 version | Amendments |
|------|--------------|--|
| | | (k) Tactile guide path shall be provided to guide the visually impaired users to the keypad in the lift hall and then to the designated accessible lift. |

| 1. Paragraph 5.5 B(a)(vi) in Chapter 51 | lift buttons should comply with paragraphs 80(1) and (4) in Division 19; | lift buttons and emergency call button should comply with paragraphs 80(1) to 80(8) and 80(i) and 80(ii) in Division 19; |
| 2. Paragraph 5.5 B(a)(viii) in Chapter 5 | grab bars complying with paragraphs 28(3) and (4) in Division 8 should be placed at a height of 900mm from the finished floor level and be fixed on both sides and at the rear of the lift car; | grab bars complying with paragraphs 28(3) and (4) in Division 8 should be placed at a height of 900mm from the finished floor level and be fixed on both sides and at the rear of the lift car (lift door(s) excepted); |
| 3. Paragraph 5.5 B(a)(ix) in Chapter 5 ² | the maximum travel should be 4000mm; | the maximum travel should be 7000mm; |
| 4. Paragraph 5.5 B(a)(xii) in Chapter 5 ³ | The landings to a vertical lifting platforms at the 2 access levels should be in opposite directions so as to eliminate the need for the wheelchair to back-out. | Every landing to a vertical lifting platform should be in opposite direction or located at 90° relative to all other landings so as to eliminate the need for the wheelchair to back-out. This requirement does not apply to a vertical lifting platform which is provided with power-operated and automatically controlled horizontally sliding or swing doors. The kinetic energy of the automatic doors should not exceed 10J. |

¹ To unify the standards of control buttons and emergency call button of a vertical lifting platform as an accessible lift.

² To extend the limit of travel height of a vertical lifting platform to 7000mm taking into account current Code of Practice on the Design and Construction of Lifts and Escalators issued by the Electrical and Mechanical Services Department.

³ To control the arrangement on access to and egress from a vertical lifting platform with a maximum travel height up to 7000mm which may serve more than two access levels. Back-out arrangement of the wheelchair is allowed if a vertical lifting platform provided with automatic doors similar to an accessible lift with automatic doors.

Summary of Amendments to the Design Manual: Barrier Free Access 2008 (April 2017)

| Item | 2008 version | Amendments |
|----------------|------------------------------|--|
| 5. Division 11 | 5. Division 11 of Chapter 4# | (To add paragraph (da) after paragraph (d) in Section A) |
| | | (da) Power-operated door is considered convenient for persons with a disability, and a power-operated sliding door is preferable to power-operated swing door from safety point of view. The swing path and mechanism of power-operated swing doors should not pose a risk of colliding with passers-by. |
| 6. Division 11 | | (To add paragraph (ea) after paragraph (e) in Section B) |
| of Chapter 4* | | (ea) A power-operated door should be designed as follows: |
| | | (i) push pad type control buttons having a minimum dimension of 20 mm should be used to open or lock the door; |
| | | (ii) after the door is open, the door should be automatically closed after a minimum of 10-second time lapse. An audible signal should be provided to signify the door opening and closing action; |
| | | (iii) a detection device should be provided to re-open the door in the event of hitting any obstacle. The device should be positioned at a height between 300 mm to 400 mm above the finished floor level; |
| | | (iv) a lock button should be provided inside the toilet. The locking device should be able to be released from the outside manually upon activation of an emergency break glass unit installed between 1800 mm to 2000 mm above the finished floor level outside the toilet. The maximum horizontal force for opening the door manually should comply with the requirements stipulated in paragraph 43 in Division 10; |

| Item | 2008 version | Amendments |
|---------------------------------------|--------------|---|
| 6. Division 11 of Chapter 4* (cont'd) | | (v) in case the lock button is pressed before the door-closing action is complete, the door should still be able to be locked;(vi) an audible message should be provided in English, Cantonese and Putonghua to inform the user after the door is locked; |
| 4 | d | (vii) an indicator activated by the locking device signifying the toilet is being occupied should be provided both inside and outside the toilet; |
| | | (viii) the door should be provided with vertical grab rails fixed on both sides of the door at the height of 800 mm from the finished floor level (measuring from the bottom of the grab rails) and with a grip space of not less than 30 mm clear of the door. Grab rails should not be less than 32 mm and not more than 40 mm in external diameter and not less than 600 mm in length; |
| | | (ix) the door including control buttons should have a minimum luminous contrast of 30% with the door frame and their surrounding finishes; |
| | | (x) a back-up emergency power supply should be provided for at least 20 minutes in power failure situation; |
| | | (xi) the control buttons should be installed at the wall adjacent to the door opening such that the user will not be interfered by the door movement. For a door swinging into an area with internal corner, the buttons should be located at least 600 mm from the internal corner of a room and the button should have a clear 1000 mm minimum distance from the swing of the door; |

| Item | 2008 version | Amendments |
|--------------------------------------|--------------|--|
| 6. Division 11 of Chapter 4*(cont'd) | | (xii) the control buttons should be located at not less than 900 mm and not more than 1200 mm above the finished floor level;(xiii) separate door open and lock buttons should be provided inside the toilet and placed together; |
| | | (xiv) Braille and tactile marking should be provided to the control buttons in compliance with the requirements stipulated in paragraphs 80(5) and 80(6) in Division 19 and Figures 25A and 25B; and |
| | | (xv) user instructions in Chinese, English and Braille on how to open and lock the door should be provided adjacent to the control buttons inside the toilet. |
| | | See examples in Figures 25A to 25D. |

| 9. Division 11 | | (To add a heading and paragraph (m) after paragraph (l) in Section B) |
| of Chapter 4* | | Grab Rails |
| | | (m) The surface of the grab rails should be slip-resistant, e.g. stainless steel with hair-line finish. |
| 10.Section B in Division | Taps and other controls should be installed between the centre line and the outer edge of the bathtub. | (To designate the existing requirement as paragraph (a) and to add paragraphs (b), (c), (d), (e) and (f) in Section B) |
| 12* | | Taps and Controls |
| | | (a) Taps and other controls should be installed between the centre line and the outer edge of the bathtub. |
| | | Grab Rails |
| | | (b) The surface of the grab rails should be slip-resistant, e.g. stainless steel with hair-line finish. |
| | | (c) Two additional vertical grab rails should be installed for shower compartments and they should: |
| | | (i) have a minimum length of 750 mm; |
| | | (ii) be installed at a height between 700 mm and 800 mm measured from the bottom of the bars to the finished floor level; and |
| | | (iii) be provided adjacent to the shower seat such that one is mounted beside the shower seat and another one is mounted not more than 450 mm from the edge of the shower seat (see Figure 27). |

| Item | 2008 version | Amendments |
|---------------------------------------|--------------|--|
| 10. Section B in Division 12*(cont'd) | | Shower Seats (d) The depth of shower seats in shower compartments should be 450 mm. Emergency Call Bells in Accessible Bathrooms and Shower Compartments |
| | | (e) The push button of the emergency call bell should be appropriately located and conveniently accessible to all users. The emergency call bell when activated should emit audible or visible alarm signal which should be readily noticeable for summoning assistance for the person in the bathroom/shower compartment. The emergency alarm should be installed outside the bathroom/shower compartment and connected to a public information or service counter. |
| | | An emergency call bell should be equipped with a weatherproof push button for activating the alarm. The push button should be installed at the wall outside but immediately adjacent to the bathtub or shower compartment at a height between 400 mm to 600 mm above the finished floor level. A notice "Emergency Call" in English, Chinese and Braille shall be fitted next to the emergency push button. |

| Item | 2008 version | Amendments |
|------------------------------------|--|---|
| 12.Paragraph A(b) in Division 17# | In addition to a position outside the compartment or cubicle, the emergency alarm should be connected to a 24-hours manned caretaker's office. | In addition to a position outside the compartment or cubicle, the emergency alarm should be connected to a caretaker's office or public information/service counter provided under paragraph 70 in Division 15. |
| 13.Division 17 of Chapter 4# | | (To add paragraph (c) in Section A) Emergency call bells should be equipped with a back-up power supply. |
| 14.Division 10 of Chapter | | (To add paragraph (fa) after paragraph (f) in Section B) |
| 4* | | The marking provided at a frameless glass door should consist of at least a horizontal band with a minimum height of 100 mm and contrasting colours with the background to assist visibility. The marking including those in broken or solid lines, patterns or company logos, etc., should cover at least 10% of the glazing area within the zone between 900 mm and 1500 mm above the internal finished floor. If the horizontal band design is not adopted, other types of marking should still be designed horizontally across the glass door. Such kind of marking should cover at least 30% of the glazing area within the zone between 900 mm and 1500 mm above the internal finished floor. |
| 15.Division 9 of Chapter 4* | | (To add a heading and paragraph (i) after paragraph (h) in Section B) Round Edges |
| | | (i) The counters or devices installed at controlled passages and the warning guardrails provided for low headroom should be designed with round edges. |

Amendments to the Design Manual: Barrier Free Access 2008 (June 2019)

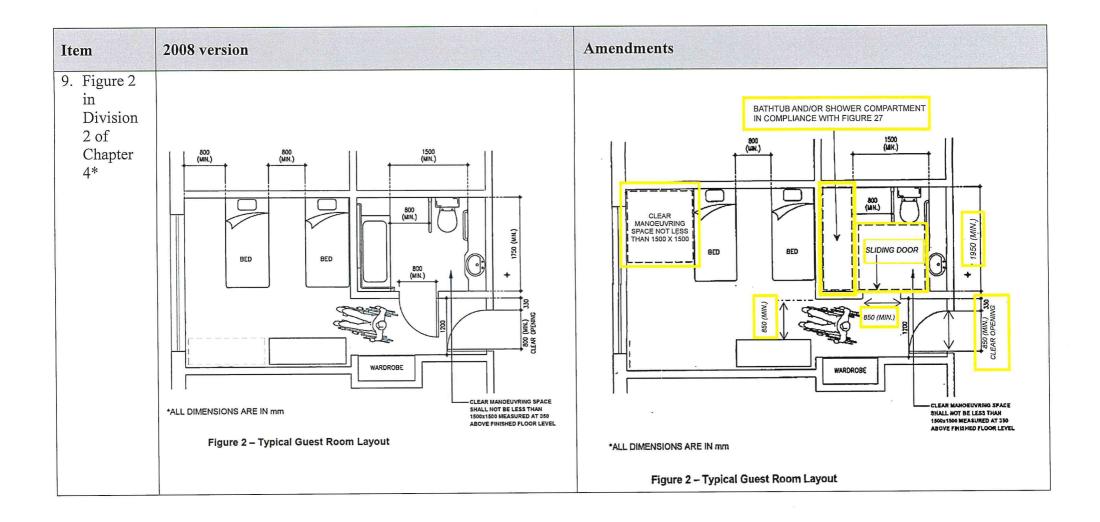

Legends:

- Amended
- Deleted
- # Design Considerations under Best Practice Section
- * Recommended Design Requirements under Best Practice Section

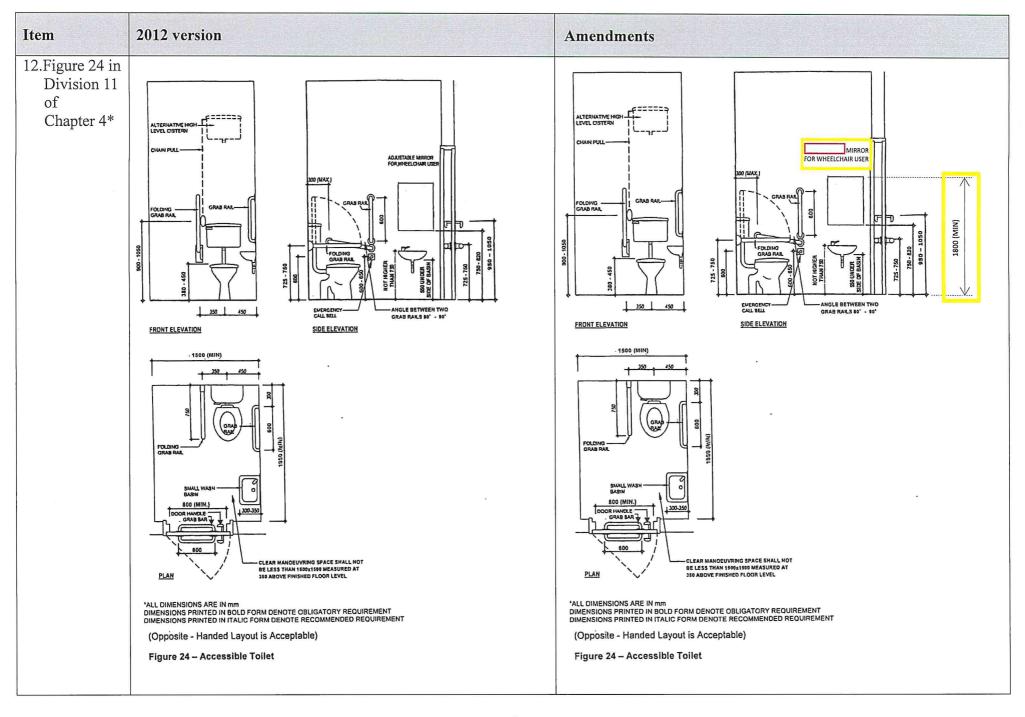

| Item | 2008 version | Amendments |
|--|--------------|--|
| 1. Division 13 of Chapter 4#* | | (To add Sections A and B after Figure 32 for paragraph 68) BEST PRACTICE SECTION |
| | | A. Design Considerations |
| | | Persons with visual impairment may have difficulty in identifying their lockers for public use. |
| | | B. Recommended Design Requirements |
| | | Each locker door in sports complex, public swimming pool complex or public areas should be provided with Braille cells and raised Arabic numerals/characters*. |
| | | * The locker key holders should be provided with raised Arabic numerals/characters. |
| 2. Section A in | | (To add paragraph (g) after paragraph (f) in Section A) |
| Division 14 of Chapter 4# | | (g) Braille Characters in both English and Chinese should be provided on signs as far as possible if space could accommodate them. |
| 3. Section A | | (To add paragraph (ba) after paragraph (b) in Section A) |
| following paragraph 80 of Division 19 of Chapter 4# | | (ba) Keypad control device should be avoided as far as practicable. |

| Item | 2008 version | Amendments | | |
|--|--------------|--|--|--|
| 4. Section B | | (To add paragraphs (ba) and (bb) after paragraph (b) in Section B) | | |
| following paragraph 80 of Division 19 of Chapter 4* | | (ba) In addition to the essential lift control buttons required under paragraph 80(1), another set of essential lift control buttons should be installed on one of the side walls of lift car, preferably in the middle and on the right side from the entering direction. For two lift door openings design, the additional set of essential lift control buttons should be on any side wall. | | |
| | | (bb) Lift control buttons in lift cars should have a minimum luminous contrasts of 50% with the background surfaces. | | |
| 5. Section B | | (To add paragraph (g) after paragraph (f) in Section B) | | |
| following paragraph 80 of Division 19 of Chapter 4* | | (g) An additional detection device positioned at a height of 200 mm above the floor of the lift car should be provided. | | |
| 6. Section B following | 19 | (To add a heading and paragraph (h) after paragraph (g) added in item 5 above) | | |
| paragraph 80 of Division 19 | | Depth of Accessible Lift Car | | |
| of Chapter 4* | | (h) The clear depth of an accessible lift car should be not less than 1 500 mm. | | |

| Item | 2008 version | Amendments | |
|--|--|--|--|
| 7. Section A following paragraph 83 of Division 19 of Chapter 4# | Signs indicating the location of an accessible | (To designate the existing requirement as paragraph (a) and to add paragraph (b) in Section A) A. Design Considerations (a) Signs indicating the location of an accessible lift should be clearly visible from the main entrance of the building. Additionally, a sign identifying the floor reached should be provided on each landing in a location that can be easily seen from the lift and is designed in luminous contrasts with its surroundings. (b) The audio indication of the stopping floor should be clear and without background noise. | |
| 8. Section B following paragraph 83 of Division 19 of Chapter 4* | | (To add headings and paragraphs (c), (d) and (e) after paragraph (bb) in Section B) Indication in Lift Cars (c) The visual indicators and audio indication required under paragraph 82 should be provided in all other passenger lift cars. (d) The voice for audio indication in passenger lifts should be more than 10 dB and should not be more than 80 dB above ambient level, measured at the annunciator. The voice should have a frequency between 300 Hz and 3 000 Hz. Visual Communication System (e) A visual communication system such as the provision of monitor for video call in the lift car should be provided to all passenger lifts to assist persons with hearing impairment in lift car to communicate with the building management office or the caretaker's office in emergency situation. | |

| Item | 2008 version | Amendments |
|---------------------------|--------------|--|
| 10. Section B in Division | | (To add headings and paragraphs (h) and (i) after paragraph (g) in Section B) |
| 10 of Chapter 4* | | Doors to Areas with Accessible Facilities |
| | | (h) Fire rated doors leading to areas with accessible facilities should be provided with hold-open device except for doors to a required staircase forming part of a protected exit and its protected lobby. Doors not for fire safety purposes leading to areas with accessible facilities should be automatic. |
| | | Width of Doors |
| | | (i) Door, including one leaf of a double-leaf door, should have a clear width of not less than 850 mm between the open door and opposite jamb or the other leaf. |
| 11. Section B | | (To add a heading and paragraph (p) after paragraph (o) in Section B) |
| in Division 11 of | | Washroom Accessories |
| Chapter 4* | | (p) The manually operated controls of washroom accessories should be at a position which is not higher than 1 100 mm above the finished floor level. |

| Item | 2008 version | Amendments |
|---------------------------------|--------------|---|
| 13.Division 17 of Chapter 4* | | (To add Section B after Section A) |
| 1 | | B. Recommended Design Requirements |
| | | (a) The emergency call bell when activated should emit audible and visible alarm signal which should be readily noticeable for summoning assistance. |
| | | (b) Visible and audible signal should be emitted inside the accessible toilet when the emergency call bell is activated. |
| 14. Division 15 | | (To add Section B after Section A) |
| of Chapter 4* | | B. Recommended Design Requirements |
| þ | | Leg space of a depth between 480 mm to 600 mm should be provided for public information or service counters. |
| 15. Section B in | | (To add a heading and paragraph (fa) after paragraph (f) in Section B) |
| Division 11 of Chapter 4* | | Baby Care Room |
| | | (fa) The room should be provided with a clear manoeuvring space not less than 1 500 mm x 1 500 mm measured at 350 mm above finished floor level. |
| 16. Section B in | .6 | (To add paragraph (d) (iv) and (v) after paragraph (d)(iii) in Section B) |
| paragraph 5.6 of Chapter 5* | | Control |
| | | (d) Controls should: - (i) be at or near to the front of the fountain; (ii) be operable with one hand; and (iii) require no tight grasping, pinching, or twisting of the wrist; (iv) require a force of 22N or less to activate; and (v) be hand-operated control with minimum dimension of 50 mm. |

Summary of Amendments to the Design Manual: Barrier Free Access 2008 (October 2020)

| Design Considerations and Recommended Design Requirements under Best Practice Section | | | |
|---|---|--|--|
| 1 | Braille and tactile information for room numbers and fire exit maps at guest rooms in hotels, hostels and guesthouses (item 1) | | |
| 2 | Resting places for long corridors or passageways (items 2 and 3) | | |
| 3 | Automatic doors for all main entrances (item 4) | | |
| 4 | Unobstructed area adjacent to the door handle on the leading face of a single door (item 5) | | |
| 5 | Bevelled edge of door threshold (item 6) | | |
| 6 | Height of shower head (item 7) | | |
| 7 | Braille and tactile plan of toilet and changing room (item 8) | | |
| 8 | Tactile guide path for office building, hotel, guesthouse, hostel and bank (item 9) | | |
| 9 | Position of the Braille and tactile sign for the public toilet (item 10) | | |
| 10 | Increase in the illumination level for lift lobbies of upper floors, corridors, accessible paths and staircases (items 11 and 12) | | |
| 11 | Mirror in accessible lift car (item 13) | | |

Amendments to the Design Manual: Barrier Free Access 2008 (October 2020)

Legends:

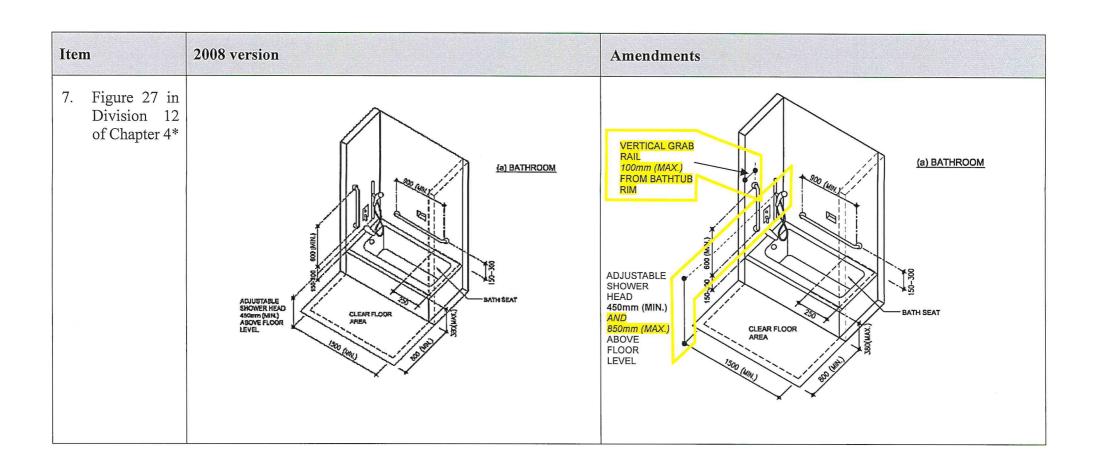

- # Design Considerations under Best Practice Section
- * Recommended Design Requirements under Best Practice Section

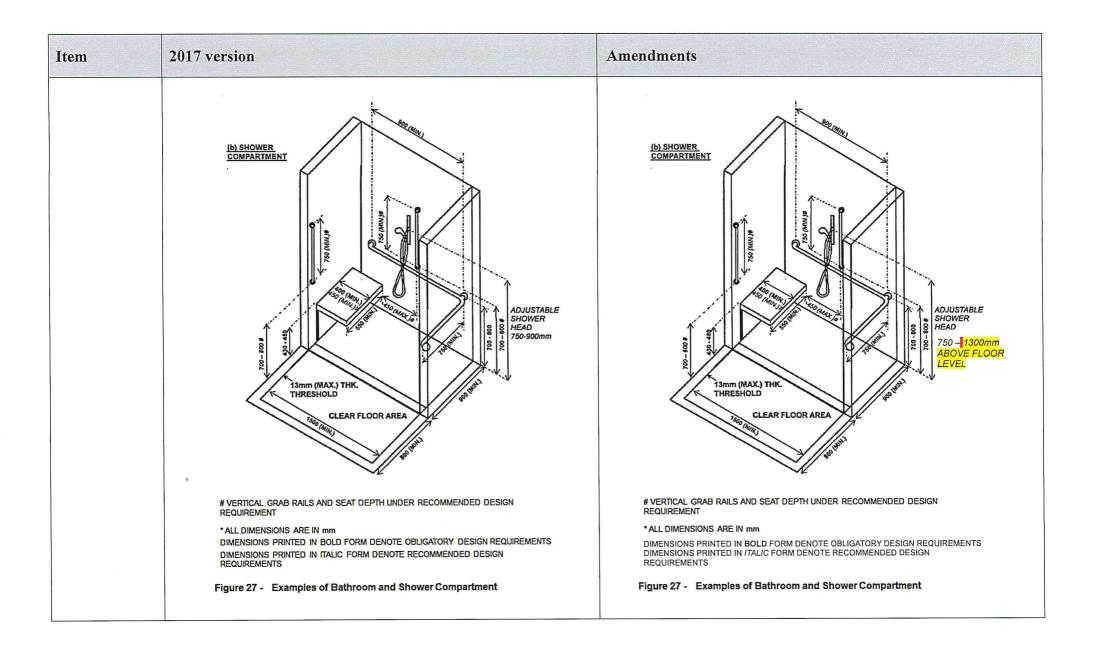

| Iter | Item | | 2017 version | | Amendments | |
|------|---|--|--------------|---|---|--|
| 1. | Section B in Division 2 of Chapter 4* | (b) A minimum of two guest rooms (being not accessible guest rooms) for every 100 guest rooms and any part thereof should be provided with visual door bells installed at a prominent location and the function can be switched on or off conveniently by the guest. | (b) | For every 100 guest rooms and any part thereof, in addition to accessible guest rooms, the following types of guest rooms should be provided: (i) A minimum of two guest rooms with visual door bells installed at a prominent location and the function can be switched on or off conveniently by the guest; and (ii) A minimum of two guest rooms located near lift lobby with Braille and tactile fire exit maps at the back of guest room doors, and Braille and tactile information for main lamp switch controls. | | |
| | - | | | (c) | Where planning allows, the accessible guest rooms required under paragraph 7(2) of Division 2 should be provided with the facilities in paragraph (b)(i) and (ii) above in full or in combination. | |
| | | | | (d) | Where planning allows, the guest rooms in paragraph (b)(i) above should be provided with the facilities for accessible guest rooms in paragraph 7(2) of Division 2 and facilities in paragraph (b)(ii) above in full or in combination. | |
| | | | | (e) | Where planning allows, the guest rooms in paragraph (b)(ii) above should be provided with the facilities for accessible guest rooms in paragraph 7(2) of Division 2 and facilities in paragraph (b)(i) above in full or in combination. | |
| | | | | (f) | For floors with guest rooms provided under paragraph (b)(ii) above, Braille sign should be installed on the wall adjacent to the open side of each door leading to an exit staircase to indicate such information. The sign should be placed at 900 mm to 1500 mm above the finished floor level. | |

| Iter | n | 2008 version | Amendments |
|------|---|--------------|---|
| 1. | Section B in Division 2 of Chapter 4* (cont'd) | | (g) A sign with guest room number in raised Arabic numerals/characters and Braille should be installed on the wall adjacent to the door lock of all guest rooms. The sign should be placed at 900 mm to 1500 mm above the finished floor level. |
| 2. | Section A in | | To add paragraph (e) after paragraph (d) in Section A |
| | Division 9 of Chapter 4# | | (e) Long corridors and passageways are difficult for the persons with locomotion impairment to negotiate. Therefore, adequate resting places with resting facilities should be provided therein. Such resting facilities should not reduce the statutory requirements on the clear width of access and manoeuvring space and should not cause obstruction to access, circulation and exit routes. |
| 3. | Section B in | | To add a heading and paragraph (j) after paragraph (i) in Section B |
| | Division 9 of Chapter 4* | of | Resting Places |
| | | | (j) Seats (including fold-down seats) or lean-on railings should be provided in recessed areas at maximum intervals of 50 m in: |
| | | | (i) long corridors and passageways within transport stations, interchanges and passenger terminals; and (ii) public passages within a building connecting with transport stations, interchanges and passenger terminals. |

| Ite | n | 2008 version | Amendm | ents |
|-----|--|---|-------------------------------------|--|
| 4. | Section B in Division 10 of Chapter 4* | (d) Automatic door opener should be provided on the main entrance door of buildings not included in paragraph 45 and should: (i) remain open for a minimum of 5 seconds; (ii) have a guardrail where it opens into a route of travel (see Figure 23); (iii) have a sign showing automatic door; and (iv) be located outside of the door swing. Sliding automatic door with overhead sensor operating device or manual large button control should be provided. | pr us (i) (ii (iv Sl | have a guardrail where it opens into a route of travel (see Figure 23);have a sign showing automatic door; and |
| 5. | Section B in Division 10 of Chapter 4* | | Unobstru (j) A | heading and paragraph (j) after paragraph (i) in Section B ucted Area n unobstructed area adjacent to the door handle on the leading face f a single door should not be less than 600 mm in width. |

| Item | 2008 version | Amendments |
|---|--------------|--|
| 6. Section B in Division 10 of Chapter 4* | | To add a heading, paragraph (k) and Figure 23A after paragraph (j) in Section B Door Thresholds (k) Door threshold (see Figure 23A) should have a bevelled and round edge on each side at a gradient not steeper than 1:2. NOT STEEPER THAN 1:2 Figure 23A – Example of Door Threshold |

| 6. Section B in paragraph 5.6 of Chapter 5 * | (e) The spatial arrangement should allow for the provision of: (i) a clear floor space of at least 750 mm x 1200 mm; (ii) a clear knee space of at least 750 mm wide, 200 mm deep and 680 mm high between the bottom of the apron and the floor or ground; and (iii) a toe space not less than 750 mm wide, 230 mm deep and 230 mm high. | (e) The spatial arrangement should allow for the provision of: (i) a clear floor space of at least 800 mm x 1200 mm; (ii) a clear knee space of at least 800 mm wide, 200 mm deep and 680 mm high between the bottom of the apron and the floor or ground; and (iii) a toe space not less than 800 mm wide, 230 mm deep and 230 mm high. |
| | | |

CHAPTER 6

ELDERLY-FRIENDLY DESIGN GUIDELINES

6.1 GENERAL

The guidelines set out in this Chapter aim to provide a safe and comfortable living environment for the elderly who may gradually experience declining abilities; promote active ageing by enabling the elderly to achieve autonomy and independence without the help of others; and promote the elderly's well-being, in particular social interaction among the elderly and between the elderly and other age groups.

Building owners and designers are encouraged to adopt these guidelines in the building design as far as practicable.

6.2 DESIGN GUIDELINES

The design guidelines set out as recommended design requirements are grouped into four categories, namely Mobility and Accessibility (section 6.2.1), Design Adaptability (section 6.2.2), Well-being (section 6.2.3), and Gerontechnology (section 6.2.4).

6.2.1 Mobility and Accessibility

The functional capacity (such as muscular strength, balancing, vision and hearing) of a person often declines gradually as ageing progresses, which may increase the risk of accidents and injuries. One crucial factor for ageing in place is to ensure safe mobility and accessibility of the built environment, both inside and beyond the residential units.

Improving mobility and accessibility can significantly enhance the safety, health and well-being, as well as the convenience of the elderly, promoting their independence and reducing the risk of falls and other health complications.

In addition, ensuring smooth circulation between various major destinations will facilitate the convenient and efficient movement of building occupants, especially for the elderly.

| Location | Features | Recommended Design Requirements |
|-------------------|---------------------------|---|
| Residential Units | | |
| Bathrooms | A1. Bathrooms | (a) Adequate clear space of not less than 1200 mm diameter should be allowed for turning of wheelchair and transfer of users. |
| | | (b) Grab bars should be provided. |
| | A2. Doors | (a) Doorways of not less than 850 mm should be provided to allow a wheelchair to pass through. |
| 9 | | (b) Sliding doors should be provided for easy and convenient use. Where sliding doors could not be provided, doors that take up less space, such as folding or double swing doors, should be provided. |
| | A3. Bathtubs / Showers | (a) Bathtub should have either built-in seat at the head end of bathtub or attachable portable seat that fastens securely to the tub when needed. |
| | | (b) Showers should be of size not less than 1500 mm x 900 mm with a folding seat to allow transfer of users. |
| | | (c) Grab bars should be provided. |
| | A4. Floor Surfaces | (a) Floor surfaces should comply with the Best Practice Section under Division 4. Slipresistant floor finishes should be used. Shiny and reflective floors such as marble, glazed tiles and the like should be avoided. |
| | | |

| Location | Features | Recommended Design Requirements |
|----------|----------------------------|---|
| Others | A5. Fittings and Furniture | Requirements (a) Double-switching systems should be considered. Switches and controls should be provided at reachable level. For bedrooms, switches and controls should be provided near bedside to avoid crossing the room in the dark. (b) Lever-type controls and handles should be used. Knob handles, push operated and self-closing type faucet |
| | | controls should be avoided. Examples of elderly-friendly door handles and faucets are provided in Figure 47. (c) Cupboards should not be installed at high levels. Overhead cabinets should be avoided. Pull-down shelves should be provided for cupboards at high level or overhead cabinets. (d) Drying racks and laundry poles projecting from the external walls of the building should be avoided. |
| | | Flip hooks should be provided at main entrance for hanging items. |

| Location | Features | Recommended Design Requirements |
|----------------------|--|---|
| Common Areas | and Facilities | |
| Accessible Routes | A6. Corridors / Paths and Lobbies / Lift Lobbies, Steps / Staircases, etc. | (a) Accessible routes should be without steps, thresholds, small ramps or kerbs, wherever possible. Where changes in level are unavoidable, handrails or grab bars should be provided. The floor and wall surface along the level of difference should be in luminous contrast. |
| | | (b) Handrails should be provided along common corridors. |
| | | (c) Steps and staircases should be designed with wider treads and lower risers. |
| | A7. Handrails | (a) Handrails to corridors, steps and staircases should be lowered to a height between 810 mm and 900 mm from the finished floor level to the top of the handrails. |
| | | Handrails should be of materials such as timber or with plastic coated surfaces for easier grip. |
| | A8. Doors | (a) Automatic doors should be provided as far as practicable. |
| | | (b) If door closing devices are installed, they should be designed to allow external and internal doors to be opened with horizontal forces of not more than 28N and 18N respectively. |
| | | (c) Lever-type handles should be used. Knob handles should be avoided. Examples of elderly-friendly door handles are provided in Figure 47. |

| Location | Features | Recommended Design Requirements |
|---|--|---|
| | A9. Floor Surfaces | (a) Floor surfaces should comply with the Best Practice Section under Division 4. Slipresistant floor finishes should be used. Shiny and reflective floors such as marble, glazed tiles and the like should be avoided. |
| | | Open jointed pavers or aeration paver blocks with uneven or very rough surface should be avoided at external open spaces. |
| Lifts, Escalators and Passenger Conveyors | A10. Larger Lift Cars | (a) Larger lift cars with clear depth of not less than 1.5 m should be provided. |
| | A11. Seating within Lift Cars | (a) Resting facilities such as folding seats or lean on railings should be provided within the lift cars except fireman's lifts. |
| | A12. Lift Control Panels or Buttons | (a) Control panels or buttons at the lift lobbies should be located at 1050 mm above the finished floor level. They should be easy to operate and have a minimum luminous contrast of 30%. |
| | | (b) Lift control buttons in the lift cars should be back-lit. |
| | | (c) Audio indication helping the elderly to locate themselves should be provided in the lift cars. |
| | A13. Escalators and Passenger Conveyors | (a) Escalators and passenger conveyors should be designed with slower speed. |

| Location | Features | Recommended Design Requirements |
|----------------------------|------------------------------------|---|
| Toilets and WC Cubicles | A14. Toilets and WC Cubicles | (a) Doors of toilets and WC cubicles should open outward or both ways. Locks and latches should be of larger sizes and be able to open from outside with a coin. |
| | | (b) Lever-type controls and handles should be used. Knob handles, push operated and self-closing type faucet controls should be avoided. Examples of elderly-friendly door handles and faucets are provided in Figure 47. |
| | | (c) Emergency alarm system should be provided. Emergency call bell should comply with Division 17. Should pull-cord be installed, they must be extended to floorlevel. |
| Car Parks | A15. Vehicular Entrances | (a) Audio / visual warning signal should be provided at vehicular entrances of car parks. |
| Others | A16. Signs and Decorations | (a) Signages Bright primary colours should be used as contrast or highlight for easier differentiation ¹ . Monotone colour should be avoided. Colour combination of signs such as yellow figure on black background or white figure on blue background is recommended. |

In general, elderly may become less sensitive to colours having shorter wavelengths (blues, greens and violets) as their lenses thicken and yellow with age. Warm colours with longer wavelengths (reds, oranges and yellows) are easier for them to differentiate.

| Location | Features | Recommended Design Requirements |
|----------|------------------------------|--|
| | | In addition to colour contrasts, clear signs with bigger font size should be provided for elderly-friendly facilities and floor numbering. |
| | | (b) Wayfinding |
| | | Different colours for different building blocks, floor levels, zonings or areas of different functional purposes are recommended to aid wayfinding. |
| | | Different floor surfaces or colours should be considered for tactile / visual cues for navigation. |
| | | Noticeable features, artworks, landmarks such as sculptures, planters, or fountains should be provided at different entrances, zonings and facilities for easy identification. |
| | A17. Lighting Arrangement | (a) All common areas of a building should have an illumination level of not less than 120 lux measured at the finished floor level, and uniformity of illumination level should be maintained for any space. |
| | | (b) Where additional lighting activated by sensors is provided to enhance the illumination level of the lift lobby of upper floors, corridors, accessible paths and staircases, the length of the corridors and paths and the walking speed of the elderly should be considered in setting the duration of such sensors. |
| | | |

| L | ocation | Features | Recommended Design Requirements |
|---|---------|----------|---|
| | | | Alternative or stand-by light sources should be provided to illuminate any spaces in case of power failure. |
| | | | Consideration should be given to ensure gradual transition of lighting levels from one place to another. |
| | | | The use of natural lighting or ambient artificial white light should be encouraged. |
| | | | The use of wall-mounted light or peripheral lighting from floor lamps are superior to a central ceiling source as the formation of shadows can be avoided. |
| | ē | | Bare light bulbs producing glare which would cause pain to the aging eyes should be avoided. |
| | | | All interior spaces should be lit at a consistent and even level, from floor to ceiling and from wall to wall. High contrast between shadow and light creating confusion and disorienting patterns should be avoided. |
| | | | |

6.2.2 Design Adaptability

A person's living needs and preferences may change throughout his/her lifespan. Allowing the flexibility in modifying a residential unit without the need for structural alteration is a crucial aspect to facilitate ageing in place. Providing design adaptability in a home environment can accommodate evolving needs and preferences over time while obviating the need for relocation at old age. This enables the elderly to stay in the same and familiar environment and neighbourhood as they age, thus maintaining their family and community connections.

| Location | Features | Recommended Design Requirements |
|-------------------|---|--|
| Residential Units | | |
| Individual Flats | B1. Convertibility without Structural Alteration | (a) To suit the needs of the elderly at different ages, the residential units should be convertible without the need for making structural alterations so as to accommodate the following elderly-friendly designs: |
| | | To reduce possible safety risks |
| | | i. Raised deck or similar to overcome level difference between indoor living area and the balcony; ii. Handrail / grab bars in toilet / shower area; iii. Shower seat; and iv. Low threshold and curbless walk-in shower. |
| | | To cater for the elderly on wheelchair |
| | | v. Lower door viewer for main entrance (see Figure 48); |
| | | vi. Wider corridor within units with a clear width of not less than 950 mm; |
| | | vii. Large and / or two-way switches and controls at reachable level; |
| | | viii. Maneuvering area of not less than 1200 mm diameter in main entrance, |

| Location | Features | Recommended Design Requirements |
|-------------------|----------|---|
| Residential Units | | |
| | | kitchen, toilet and bedroom; ix. Wider internal door with a clear width of not less than 850 mm; and x. Knee space under kitchen sink and wash basin. To improve convenience xi. Counter–top in kitchen with a depth of not more than 600 mm; and xii. Adequate drainage provisions to enable adaptive design. See Sample Layout of Elderlyfriendly Adaptive Design in Figure 49. |

6.2.3 Well-being

Design features relating to well-being aim to promote a sense of contentment, encourage social participation and enhance intergenerational interaction and harmony. They reflect the important role that the built environment plays as they cater to the physical, mental and emotional needs of the elderly. Convenient and easy access to recreational facilities with equipment/ facilities that are designed for the elderly and a greater connection with nature can significantly improve the health and quality of life of the elderly, promote physical activity, social engagement, and sense of well-being.

These amenities may also serve "multi-generation" users which will in turn promote intergenerational harmony.

| Location | Features | Recommended Design Requirements |
|--|---------------------------------|---|
| Residential Units | | |
| Habitable Space | C1. Windows | (a) Larger windows with lower window cills should be provided to increase the amount of natural light and allow views of the outside for the elderly when seated or on wheelchair (see Figure 50). This can have positive impact on moods and reduce feelings of depression and anxiety. Nevertheless, requirements of protective barrier should be complied with. Other concerns such as privacy and fear of height should also be considered. Sliding windows should be adopted to enhance daily use by the elderly. |
| Common Areas a | nd Facilities | |
| Corridors / Paths and Lobbies / Lift Lobbies | C2. Lighting and Ventilation | (a) Large windows at the end of long and dark corridors that may cause glare should be avoided. Cross ventilation should be optimised in common areas such as corridors and lift lobbies. |

| Location | Features | Recommended Design Requirements |
|----------------------------|-------------------------------------|--|
| | C3. Resting Facilities | (a) Resting places with resting facilities, such as seats (including fold-down seats) or lean on railings, should be: (i) provided on stair landings; (ii) provided in corridors more than 50 m in length; or (iii) provided in typical lift lobbies. |
| | | (b) Long corridors and passageways within transport stations, interchanges and passenger terminals, and public passages within a building connecting with transport stations, interchanges and passenger terminals should be provided with resting places with resting facilities. The resting facilities should be provided in recessed areas at maximum intervals of 50 m. |
| | | Resting facilities for items (a) and (b) above should not reduce the statutory requirements on the clear width of access and manouvering space, and should not cause obstruction to access, circulation and exit routes. |
| Toilets and WC Cubicles | C4. Elderly- friendly Toilets | (a) Elderly-friendly toilets should be provided and located in an easily accessible common area or within a toilet with multiple cubicles. See Sample of Elderly-friendly Toilet in Figure 51. |

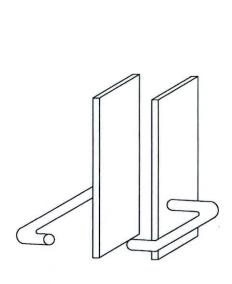

| Location | Features | Recommended Design Requirements |
|----------------------------------|---|---|
| | C5. Elderly- friendly Changing Station / Facilities in Accessible Toilets | (a) Elderly-friendly changing station / facilities with an adult sized, height adjustable changing bench, either wall mounted or free standing in accessible toilets should be provided. |
| External Recreation Spaces | C6. Elderly- friendly Resting Facilities | (a) Resting places with resting facilities, such as seats (including fold-down seats), lean-on railing, fixed chairs, tables and benches, steps, planter edges for sitting preferably with shelters or at covered areas should be provided at outdoor open space. |
| | C7 Elderly- friendly Fitness Equipment | (a) Elderly-friendly fitness equipment such as twister and stepper, pull-down equipment, stepping platforms, chest press equipment, tai-chi wheels and areas with safety flooring system should be provided. |
| | C8. Elderly- friendly Planters for Community Farming | (a) Knee spaces should be provided under the planters for community farming which can help to improve focus, memory and cognitive function (see Figure 52). |
| Others | C9. Choice of Material | (a) Sound-absorbing materials should be used for floors and walls to avoid echoes. Non-glare or low gloss finishes on floors, matt paint or textured wallpaper on walls should be considered to help reduce glare. Glass or reflective material should be avoided. |

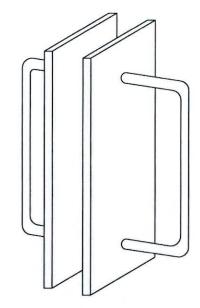

6.2.4 Gerontechnology

There are new technologies that can enhance safety and convenience, facilitate ageing in place, and foster confidence and independence of the elderly. Effective use of technology is not only a solution to elderly care but also an enabler for the elderly to lead a more independent life.

Gerontechnology helps the elderly with declining capacities to support themselves. Hardware and software applications to assist the elderly and/or their carers are under rapid development, and the elderly are becoming more technologically literate. By integrating assistive technologies into daily life, the elderly can overcome certain physical limitations, maintain cognitive function, and access vital services more easily. Some intelligent devices may also help detect accident of an unattended elderly. The adoption of gerontechnology requires a robust and accessible infrastructure that supports both technological and social integration. This includes high-speed and stable internet access in residential units and common areas of the buildings.

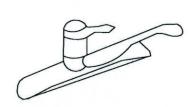

| Location | Features | Recommended Design Requirements |
|--|-------------|--|
| Residential Units and Common Areas | D1. Network | (a) Enabling works for high-speed and stable internet provision (e.g. 5G) / Global Positioning System / Radio Frequency Identification Technology to support the use of gerontechnology and Internet of Things (e.g. smart card system for main entrance; water flow sensor; call caring services; motion sensor; window opener; artificial intelligence and robotic support; remote gas heater control; and door sensor) should be provided in residential units and common areas of the buildings. |
